17 DEC 1959

MEMORANDUM FOR: Record

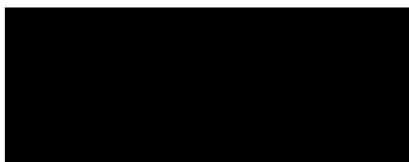

SUBJECT : Operational Report for Mission 6046, System VI.

1. The mission data sheets indicate strong switching transients caused by camera shutter motor in "L" and "S" bands. Every effort should be made to reduce the level of, if not eliminate, these transients. These are not present in the tapes from Team "B".

2. Also noted was the strong reception of the pilot's voice on all four receivers just after take-off and prior to landing. A check might be made to see if this can be eliminated or reduced.

3. The lack of a proper pre-flight check due to "local power difficulty" as indicated by the mission data sheets might have caused poor sensitivity in the receivers leading to the lack of signal activity noted on this mission. This applies to the penetration mission.

4. Except for the slave recorder failure, operation of equipment was generally satisfactory.
